

RAISED RAIL PIZZA PREP TABLES

BUILT FOR THE LINE. ENGINEERED TO PERFORM.

With Utility, performance isn't optional – it's intentional!

Utility Refrigerator's NEW Pizza Prep Table Line is not a feature-driven redesign. Standing above the competition, it is a problem-solving platform built for demanding kitchen environments.

A SMARTER RAIL AND BASE CHANGES EVERYTHING

No "Cold Wall" Compromise

Traditional cold wall systems come with baggage – ice buildup, inconsistent temperatures, and constant defrosting and cleaning. Utility eliminates all of it.

Engineered TWO-ZONE cooling airflow

We didn't just improve airflow, we rethought it.

Gentle flow over the top cools without drying foods; faster airflow on the bottom and sides protects product integrity even in high ambient conditions.

- No frost accumulation
- No messy defrost cycles
- No temperature inconsistency

Clean, controlled, reliable airflow keeps ingredients at safe temperatures without operational drag. The result? Less waste and better product quality.

Minimal Pan Recessing

Deeply recessed pans may hold temperature, but they slow down the line. Utility strikes a balance with pans that keep ingredients cold while allowing fast and ergonomic access.

Large Capacity Refrigerated Base Cabinet

Conveniently store dough boxes, meats, vegetables and other bulk items for easy restocking of the rail pans.

BUILT LIKE IT MATTERS, BECAUSE IT DOES!

Rugged Construction for Demanding Environments

From busy pizza concepts to university dining halls, this unit is engineered to take a beating and keep performing. Heavy-duty stainless steel construction, reinforced components, and a design philosophy rooted in longevity – not planned replacement.

WHY CONSULTANTS TRUST UTILITY REFRIGERATOR

95+ Years of Proven Manufacturing

That longevity isn't luck – it's discipline, craftsmanship, and an unwavering focus on performance.

Family-Owned & Operated

No shortcuts. No cost-cutting mandates from a corporate parent. Just a long-term commitment to quality, relationships, and doing things right.

Built in America

Domestic manufacturing means tighter quality control, better availability, and real support when your clients need it.

Your clients don't measure equipment in specs.

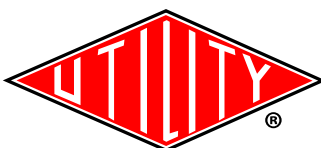

They measure it in uptime, consistency, performance, and ease of use. *Utility delivers on all four.*
